EXPERIENCE

Cerillion Technologies · Software Consultant — Aug 2025 – Mar 2026

- Identified weaknesses in the internal AI rollout and prototyped enforced structured outputs for automated testing of complex, tightly coupled backend code; defined schemas adopted by developers, reducing critical errors by 41% and overall errors by 73%.
- Ran product demos and customer training on an enterprise OSS/BSS suite, translating between technical and non-technical stakeholders; supported production deployments through API testing, SQL, and Unix automation.

IceMOS Technologies · Software Engineering Intern — Jul 2024 – Oct 2024

- Interviewed factory operators and chemical-plant engineers to find where incident response and process control actually broke down, then shipped two tools: a sensor heatmap unifying data from Raspberry Pi nodes across the fab with email/SMS alerts, and SPC history charts that let engineers trace inputs and adjust processes; cut incident response time by 57%.
- Led the migration of a legacy wafer-rework tracking system to a modern .NET stack, navigating tightly coupled technical debt to deliver a 37% improvement in resource efficiency.
- Ramped up on R and C# within a week to ship a production Statistical Process Control system.

ErasedEnigma · Founder — Apr 2024 – Oct 2024

- Built and ran the full product solo: iOS interface (Swift), Python backend, and GPT-4 model layer configured around each client's needs; served 20+ paying clients and cut software costs from ~£60 to £5 per month.
- Surveyed clients to find the real cause of high month-one churn, then turned a day-one information dump into staged guidance; reduced churn by 43% and increased customer-reported satisfaction by 82%.

The Final Shot · Co-Founder — Apr 2022 – Oct 2024

- Co-founded and ran a student events business: 13 events for up to 300 attendees and up to £5,580 revenue from a single event, grown through cold outreach and university partnerships.

PROJECTS

Ledger · TypeScript, Next.js, PostgreSQL — Sep 2026 – Present

Imports free-form training spreadsheets: an LLM proposes a mapping, deterministic code applies it, and a review screen shows source cells beside parsed results before anything is written. An AI coach queries the record through typed tools and read-only, user-scoped SQL with a timeout and row cap.

Assay · Rust, Parsing, Static analysis — Sep 2026

A rule language for checking LLM evaluation records, built in Rust: lexer, parser with error recovery, static checker and evaluator. Diagnostics point to the sub-expression responsible for a failure, so rule bugs aren't mistaken for model regressions; tested with fixtures and seeded mutation inputs.

Cold Case · TypeScript, Next.js, React — Jun 2026

A noir interrogation game: structured case generation (suspects, evidence, hidden truth) grounds streamed, in-character interviews, with history and presented evidence tracked per suspect.

Poetry Events Platform · TypeScript, SvelteKit, Hono — May 2026

Event listings, RSVPs and recommendations from shared attendance, ranked in SQL; SvelteKit, Hono and shared Zod schemas, with rotating refresh tokens and end-to-end API tests.

EDUCATION

Imperial College London — MEng, Electrical and Electronic Engineering · Oct 2021 – Jun 2025

- Relevant coursework: instrumentation and measurement, signal processing, control theory, embedded systems.

SKILLS

- **Languages & stacks:** Python, TypeScript/Node, Java, C#/.NET, SQL, R, Swift, Rust, C/C++; FastAPI, SvelteKit, Next.js, Hono, Postgres.
- **AI:** production LLM integration (GPT-4), enforced structured outputs, evaluation tooling, tool calling and model-written SQL behind read-only guardrails, PyTorch.
- **Additional:** London-based, in person; Ulster Rugby sub-academy; comfortable presenting to audiences of 400+.
